

## INTRODUCTION

- First genetically modified animal approved for human consumption
- Atlantic salmon with genes from other species
- Increased growth
- Produced by AquaBounty

## OBJECTIVES

- Bibliographic review of AquaAdvantage Salmon
- Public acceptance and knowledge

## CONCLUSIONS

- Although sAA and other GMO have been approved by the FDA, they are not widely supported
- This may be reflected by a lack of trust towards regulatory agencies
- However many consumers would buy GMO if they entail an advantage
- Nearly all consumers agree that GMO labeling should be mandatory, in the USA it is not
- Considerable amount of people without a clear position
